Getting Started

Once you downloaded & installed the system now you need to setup it so it can work for you.

Suppose you have installed it at <https://yourdomain.com> now you need to login to the system as Super Admin using the credentials given in creds.txt file.

Once you get logged into the system successfully you need to configure as per your needs.

Configurations

This section of settings contains the number of settings to manage your site as per your requirements.

Campaign Execution Settings * required Click to expand/collapse

Number of Messages per lot for campaigns

Based on your server capacity you can set how many messages should be processed every 5 Seconds (cron job) OR per lot for queue job or when CRON URL requests executes for the Campaign Messages.

Cron or Queue Job Setup * required for the campaigns to run as per schedule

☒ Enable - Queue Job/Worker

Queue Job Setup Instructions

You need to configure your queue driver as required in .env file. Database tables for the database driver already provided no need to migrate to create tables. [Laravel Queues](#)

You need to run queue worker as suggested [Running Queue Worker](#)

```
php artisan queue:work
```

Queue Worker Setup: Mark as Done

Save

- **Campaign Execution Settings** – From here you can manage the all settings related to the campaign execution.

- **Number of Messages** – Here you can set the number of messages based on your server capacity as how many messages should be processed every 5 seconds or when CRON URL requests executes for the Campaign Messages.
- **Cron or Queue Job Setup** – Using this switchery you can manage your cron or queue job setup.
 - **Queue Job Setup** – If you wish to enable queue job setup then read the given instruction for how to setup the queue job.

To setup queue job you need to configure your queue driver as require in .env file. Database tables for the database driver already provided no need to migrate to create tables. Also, you need to run queue worker as suggested.
 - **Cron Job Setup** – if you enable Cron Job Setup you can setup the CRON as per instructions given which is required for campaigns to run as per schedule. You can also use services like <https://cron-job.org/> for CRON jobs.

Once you setup the CRON click on the Cron Setup: Mark as Done.

Cron Job * required for the campaigns to run as per schedule [Click to expand/collapse](#)

You need to setup cron as given below for every minute

Recommended

You need to add a single cron configuration entry to your server that runs the schedule:run command every minute.

```
/usr/bin/php /home/servephp/wac0124.devapps.livelyworks.net/__CODEFIELD/artisan
```

[Copy](#)

----- OR -----

If special characters not accepting you can use this

```
/usr/bin/php /home/servephp/wac0124.devapps.livelyworks.net/__CODEFIELD/artisan
```

[Copy](#)

----- OR -----

```
php /home/servephp/wac0124.devapps.livelyworks.net/__CODEFIELD/artisan schedu
```

[Copy](#)

----- OR -----

If special characters not accepting you can use this

```
php /home/servephp/wac0124.devapps.livelyworks.net/__CODEFIELD/artisan schedu
```

[Copy](#)

✓ As 'artisan schedule:run' command executed, it seems that cron setup is done.

----- OR -----

```
wget -O - -q "https://wac0124.devapps.livelyworks.net/run-cron-schedule" --user-agent="c
```

[Copy](#)

----- OR -----

Or you can find other ways on net to run cron job you need to access following url for the same.

```
https://wac0124.devapps.livelyworks.net/run-cron-schedule
```

[Copy](#)

✓ You have confirmed that cron setup has been done at Friday 29th March 2024 2:30:50 pm
